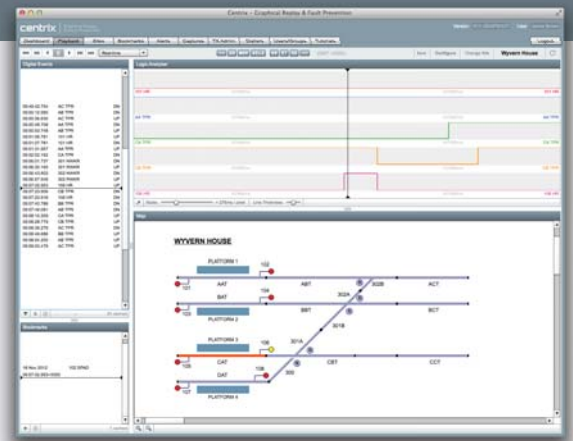

Graphical Replay & Fault Prevention

Interlocking Graphical Replay & Remote Condition Monitoring

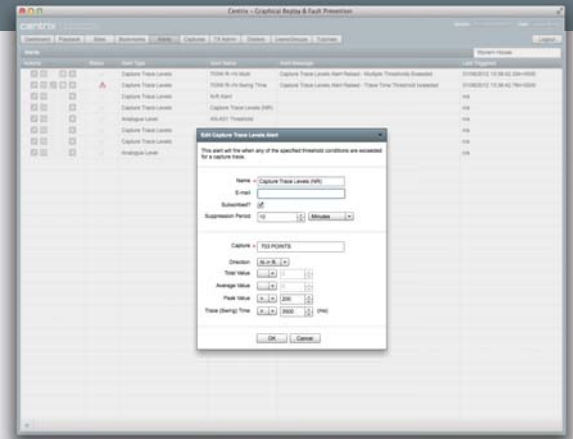

Interlocking Graphical Replay

- Web-based replay - Playback from virtually anywhere in your web browser.
- User editable, drag-and-drop map designer
- Concise listing of all monitored relay events
- Logic analyser to confirm sequencing and timing
- Create bookmarks to quickly navigate back to an incident/fault

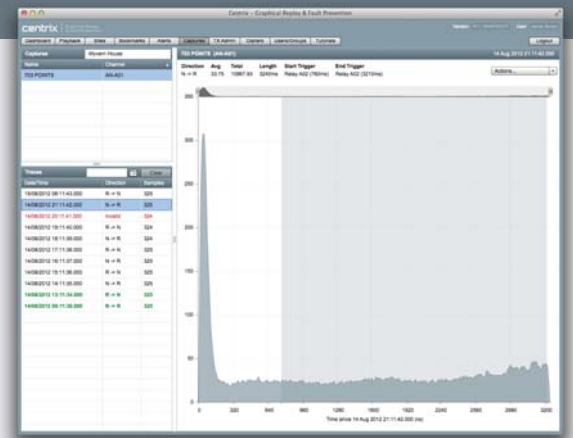

Fault Detection / Alerts

- Find & Fix - Get alerted to faults and incidents as soon as they occur
- Predict & Prevent - Spot asset deterioration and fix before failure
- Powerful e-mail alert notification schemes to keep you in control of alert frequency
- Custom alert algorithms available on request
- Add scheduled or repeating maintenance periods to automatically suppress alerts on selected assets.

Analogue & Points Trace Replay

- Add replay and analysis of all manner of analogue data sources into your sites.
- Display and overlay multiple analogue input channels on a single graph.
- Mark baseline trace(s) to see degradation after maintenance/installation.

Technical Specifications

Centrix is accessed via any modern web browser supporting the Adobe® Flash® Player. The application uses secure Java web services to deliver content in AMF format over a secured HTTP connection.

System Requirements
